

game_user_churn (AI Eng) Project

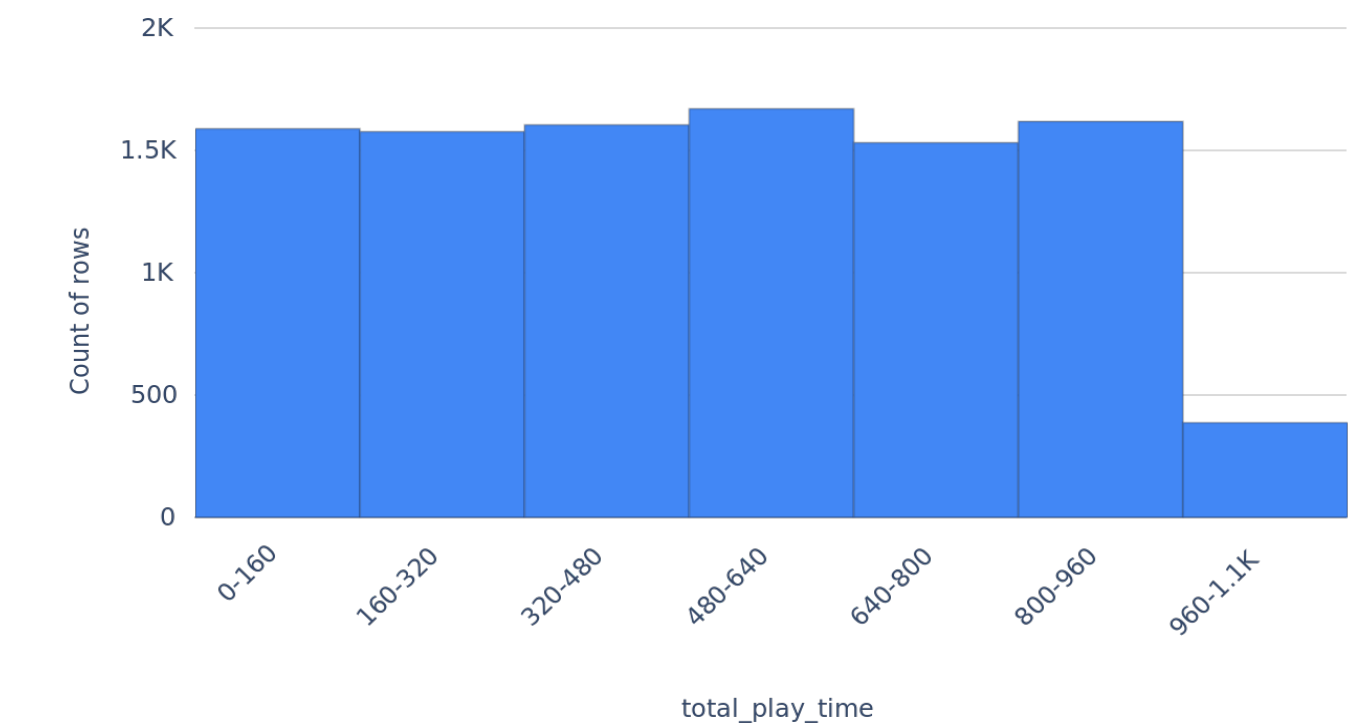

countries

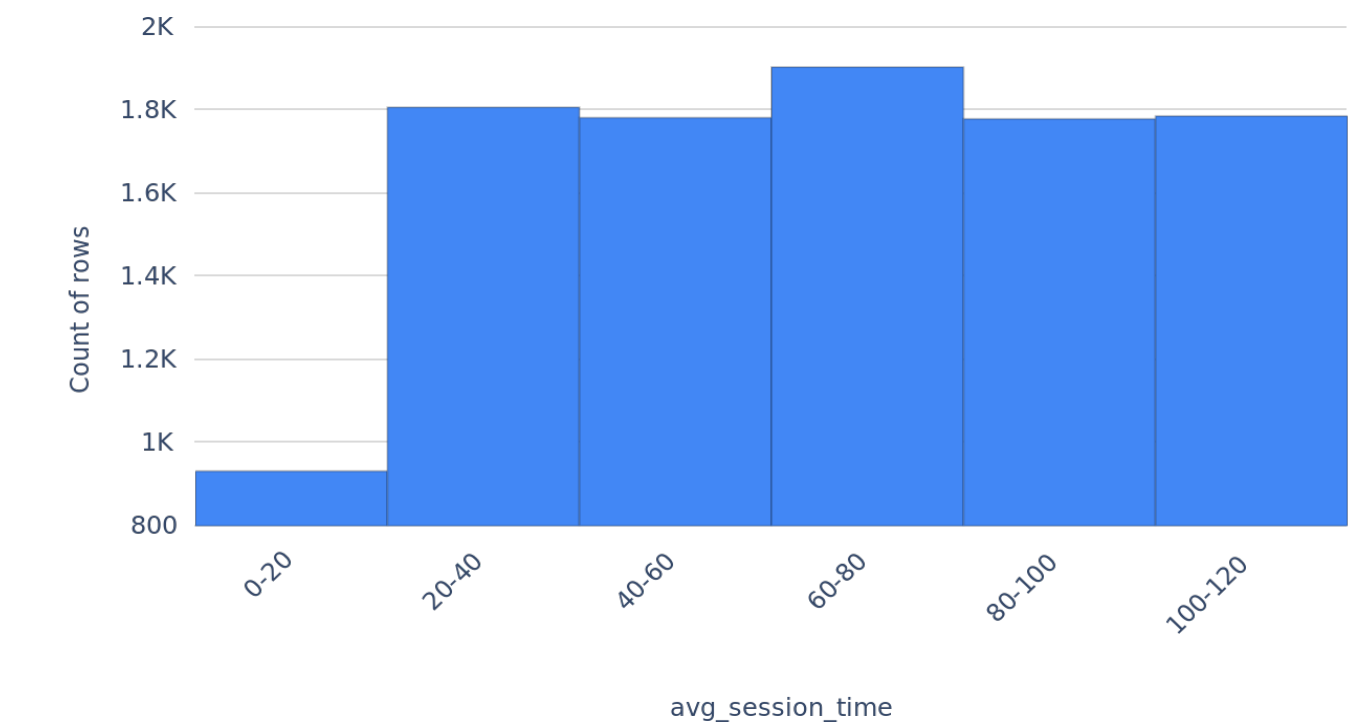

ages

total_play_time

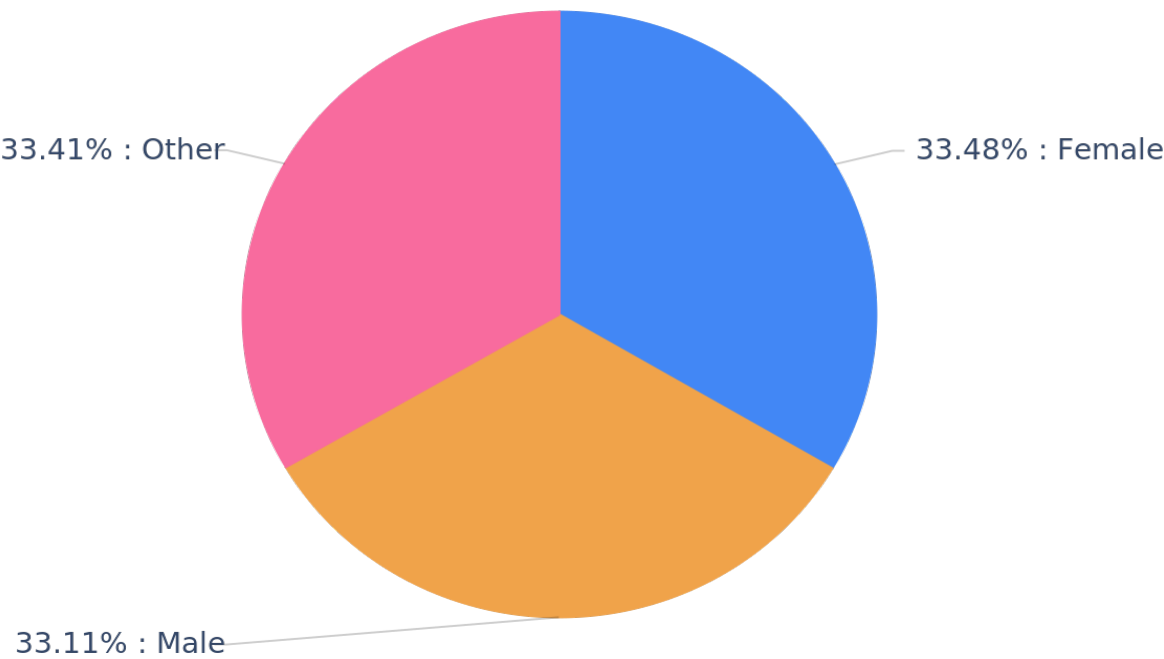

avg_session_time

Comparing the gender distribution of players.

genders

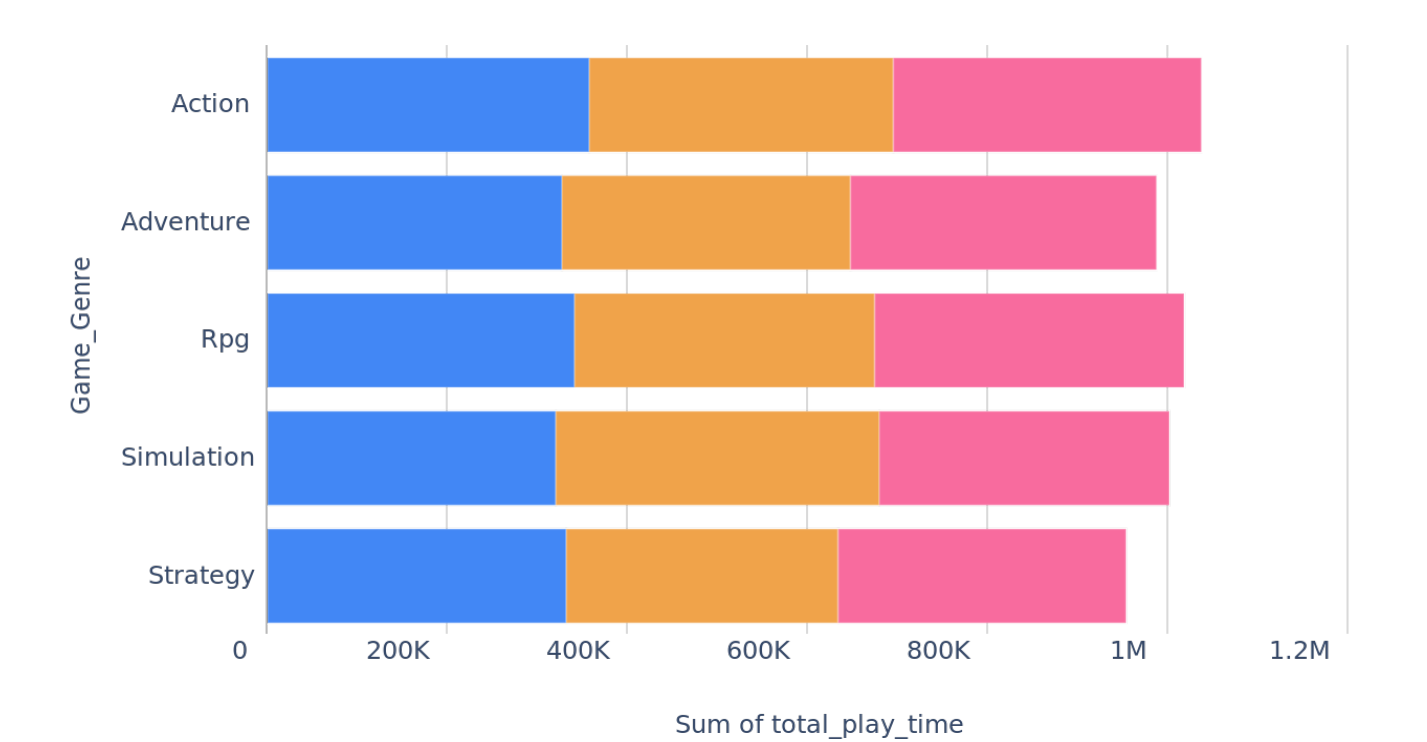

Tracking total play time over time.

total_play_time per last_login

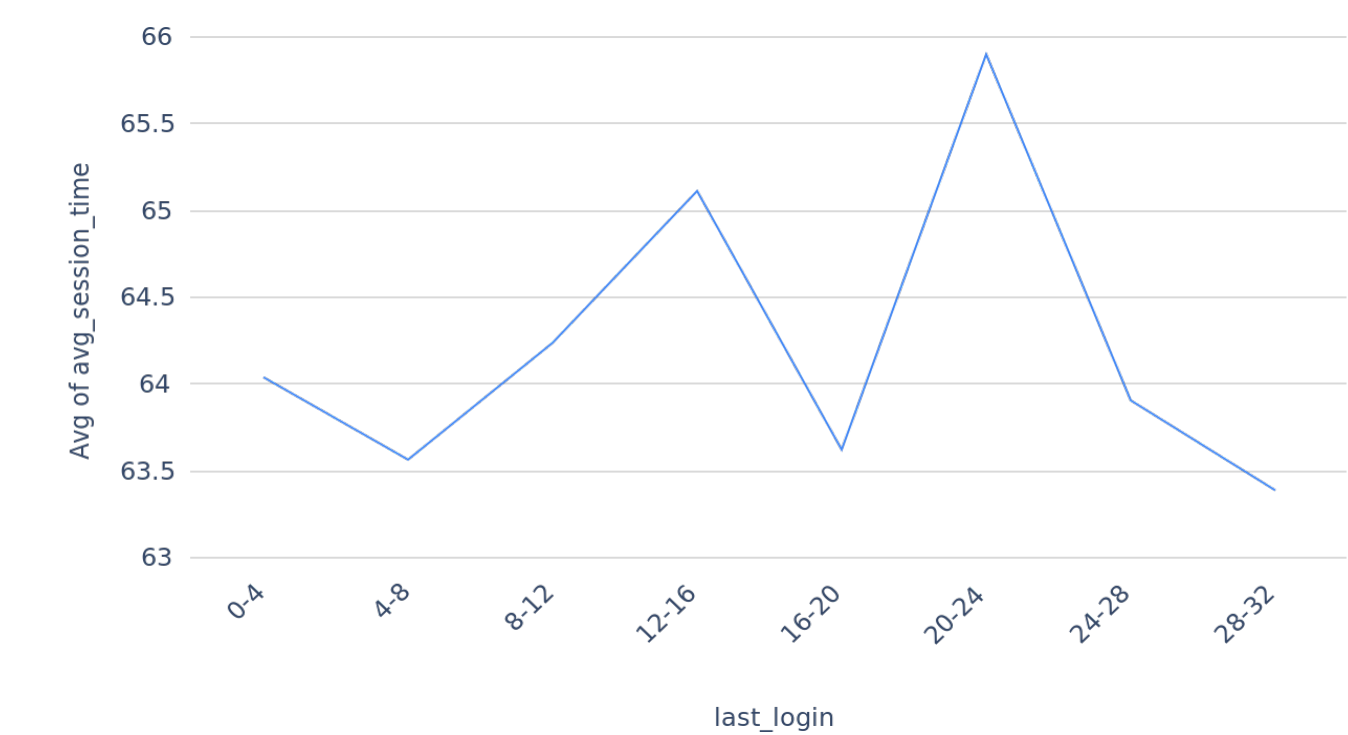

Comparing total play time across different game genres, segmented by gender.

total_play_time per game_genre, grouped by gender

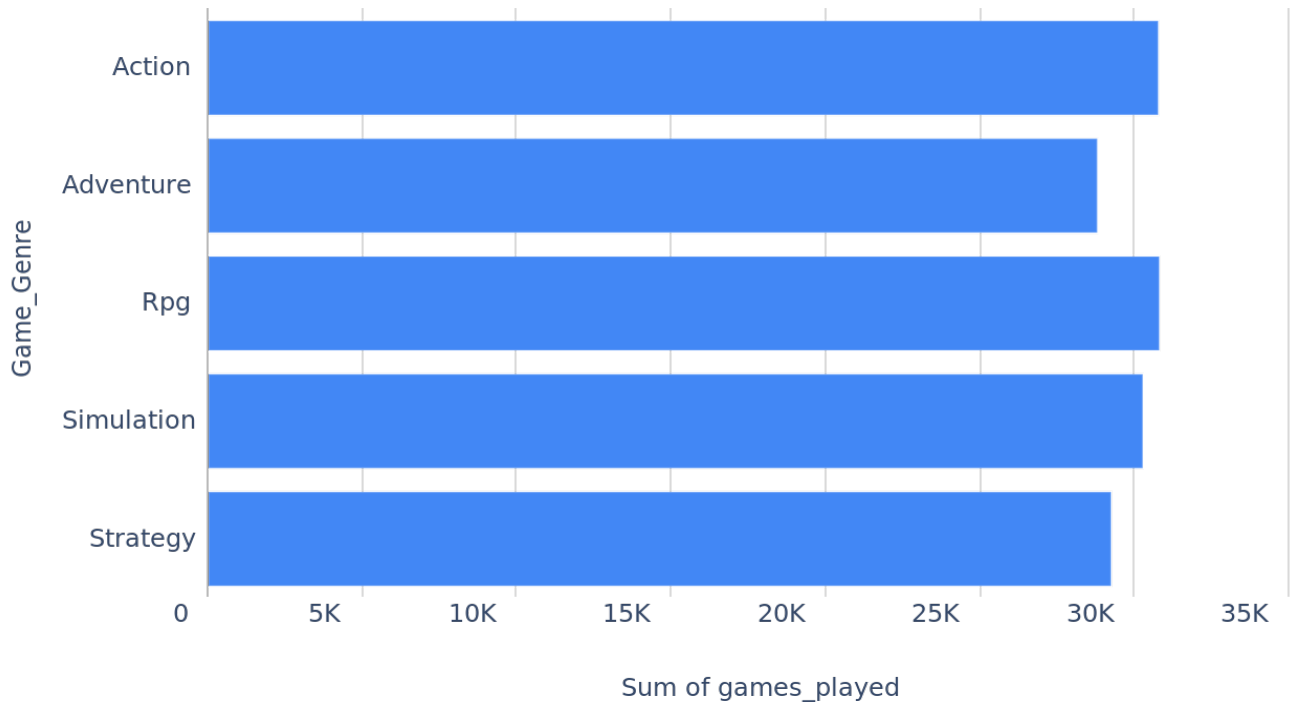

Monitoring the trend of average session time over time.

avg_session_time per last_login

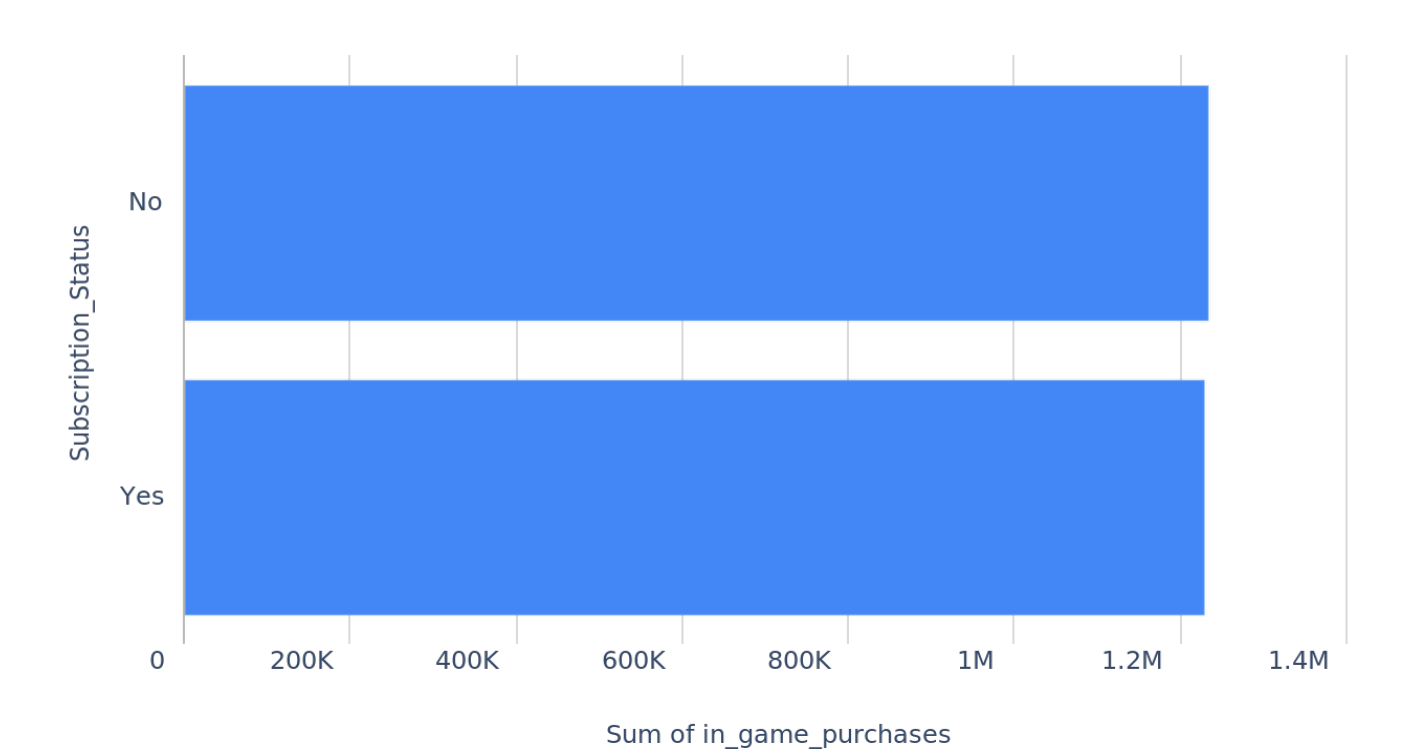

Comparing the number of games played across different game genres.

games_played per game_genre

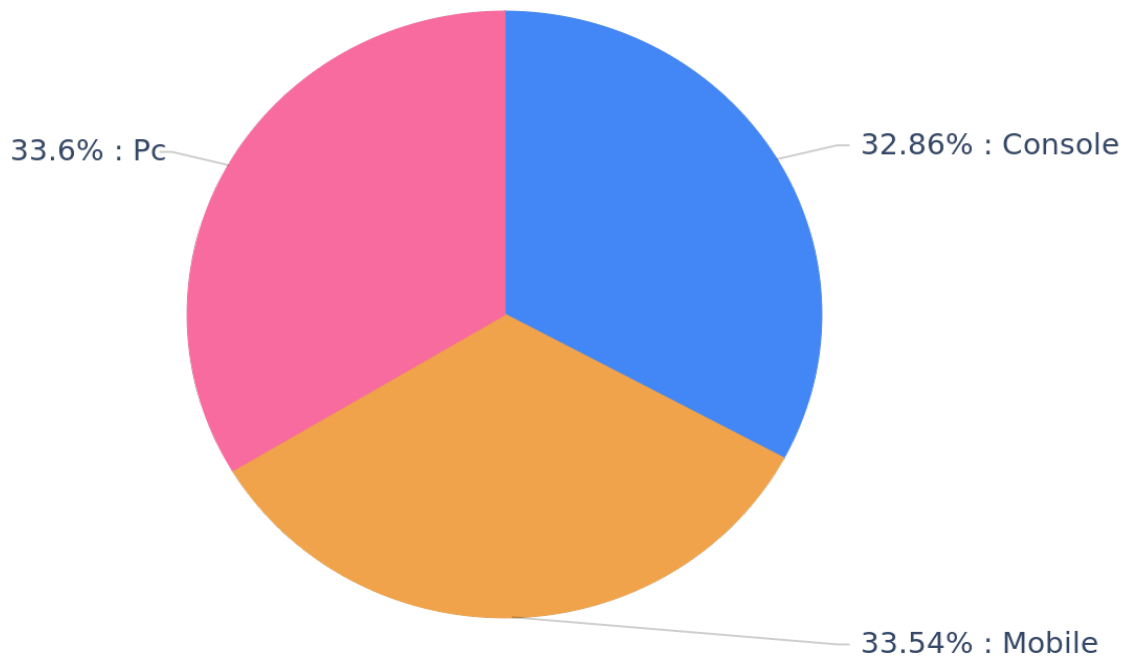

Contrasting in-game purchases between subscription and non-subscription players.

in_game_purchases per subscription_status

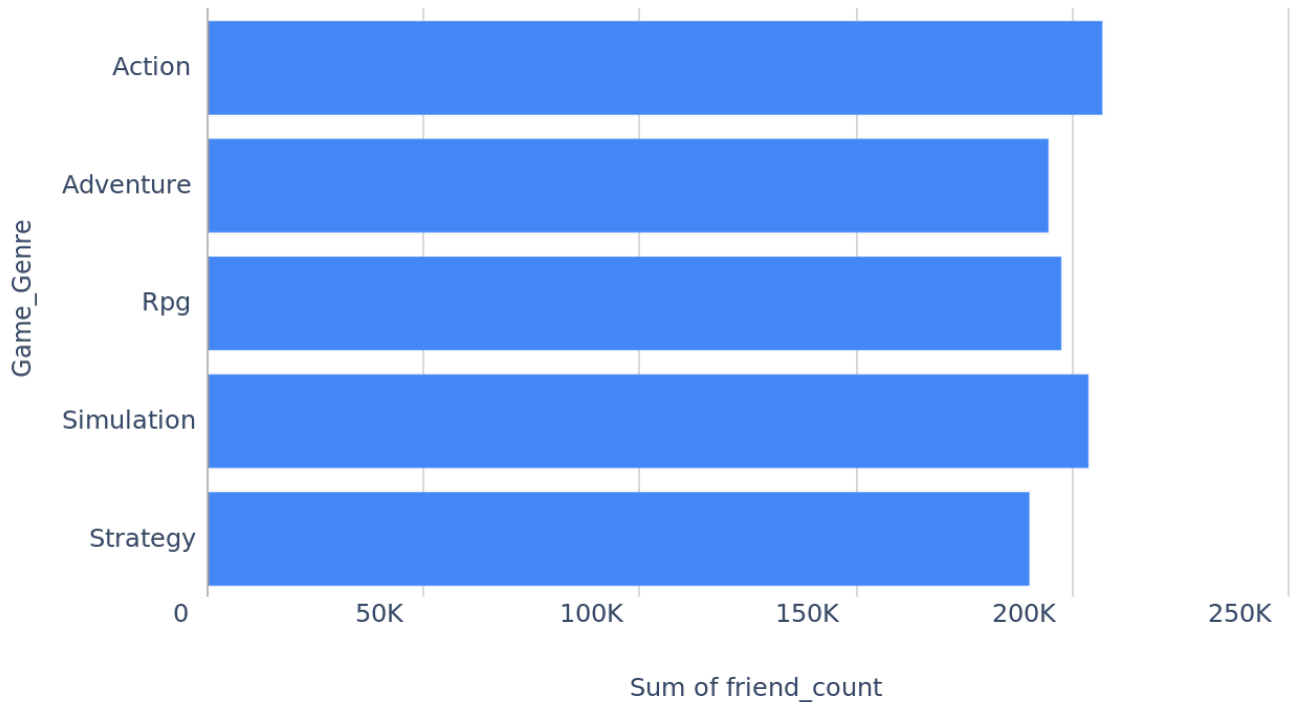

Assessing the contribution of each device type to total play time.

total_play_time per device_type

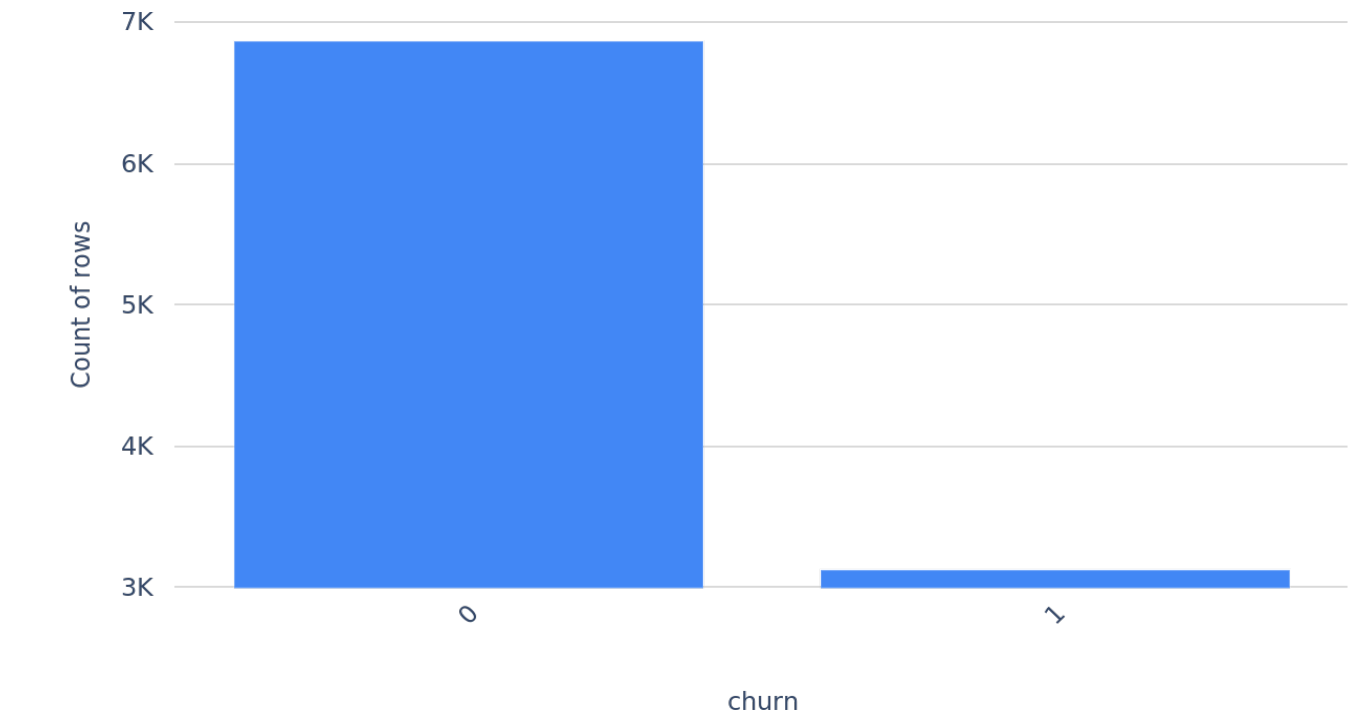

Comparing the average friend count across different game genres.

friend_count per game_genre

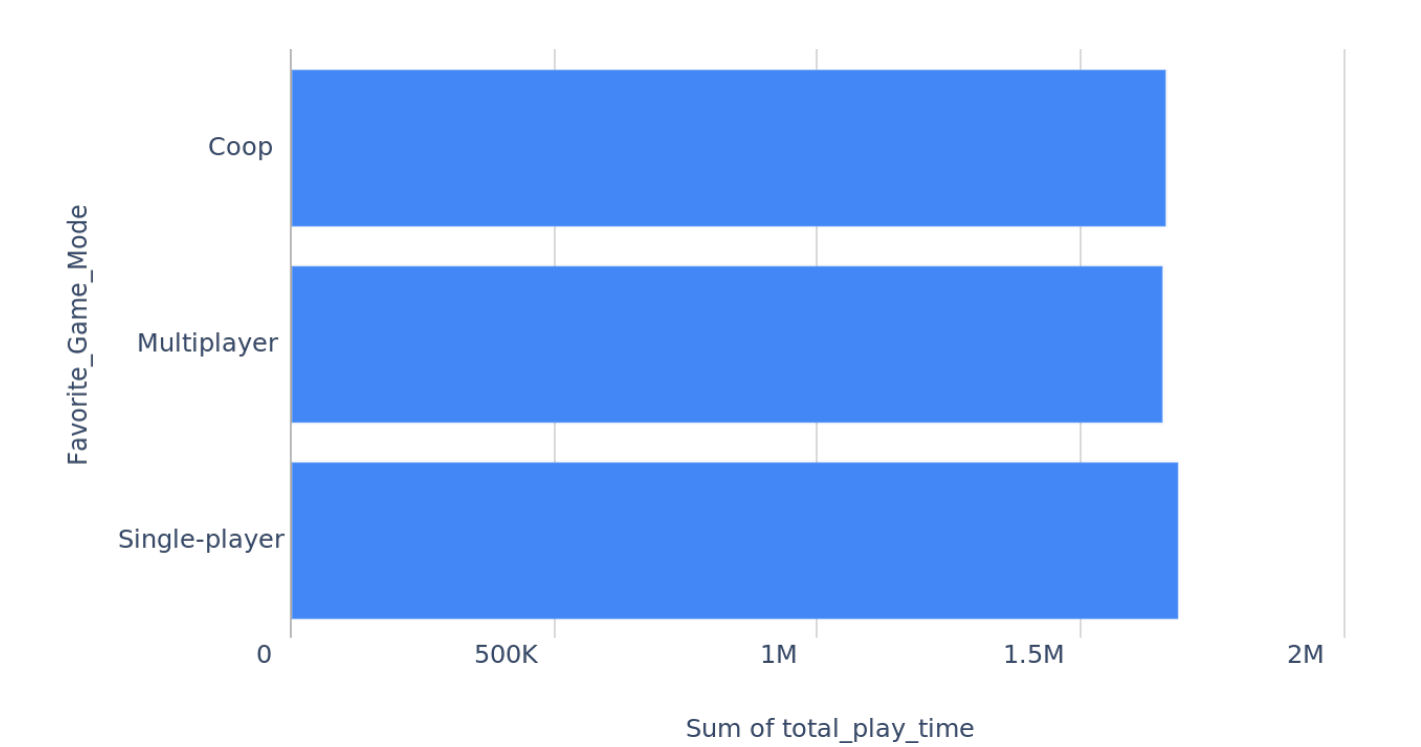

Visualizing the churn rate of players.

churns

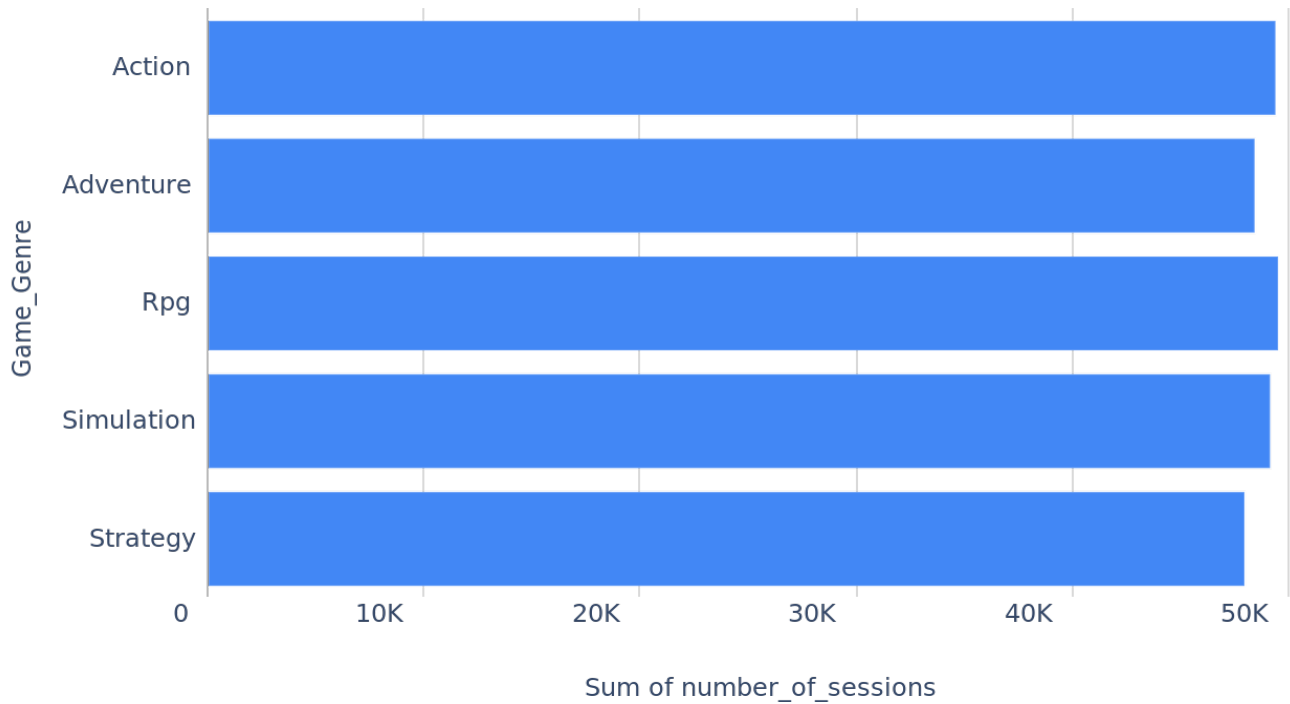

Identifying the favorite game mode with the highest total play time.

total_play_time per favorite_game_mode

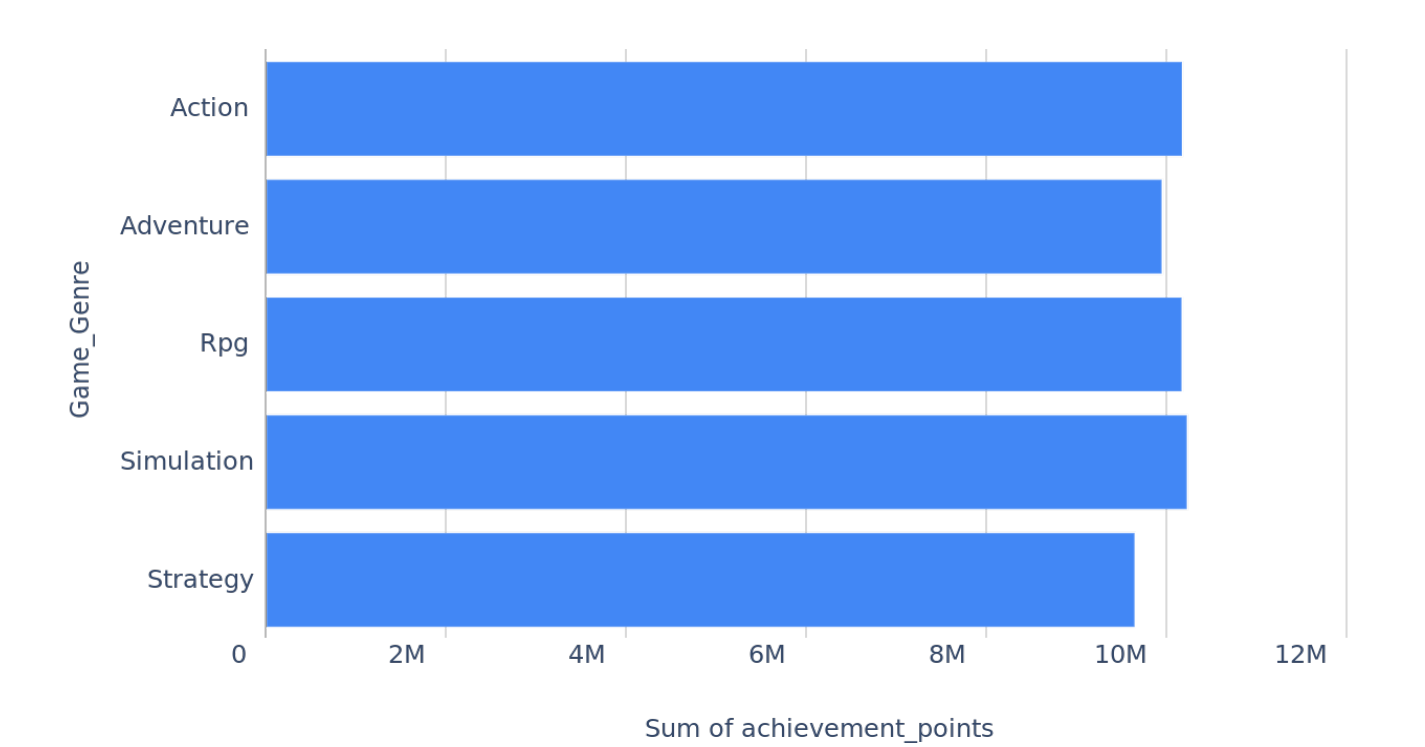

Comparing the average number of sessions played across different game genres.

number_of_sessions per game_genre

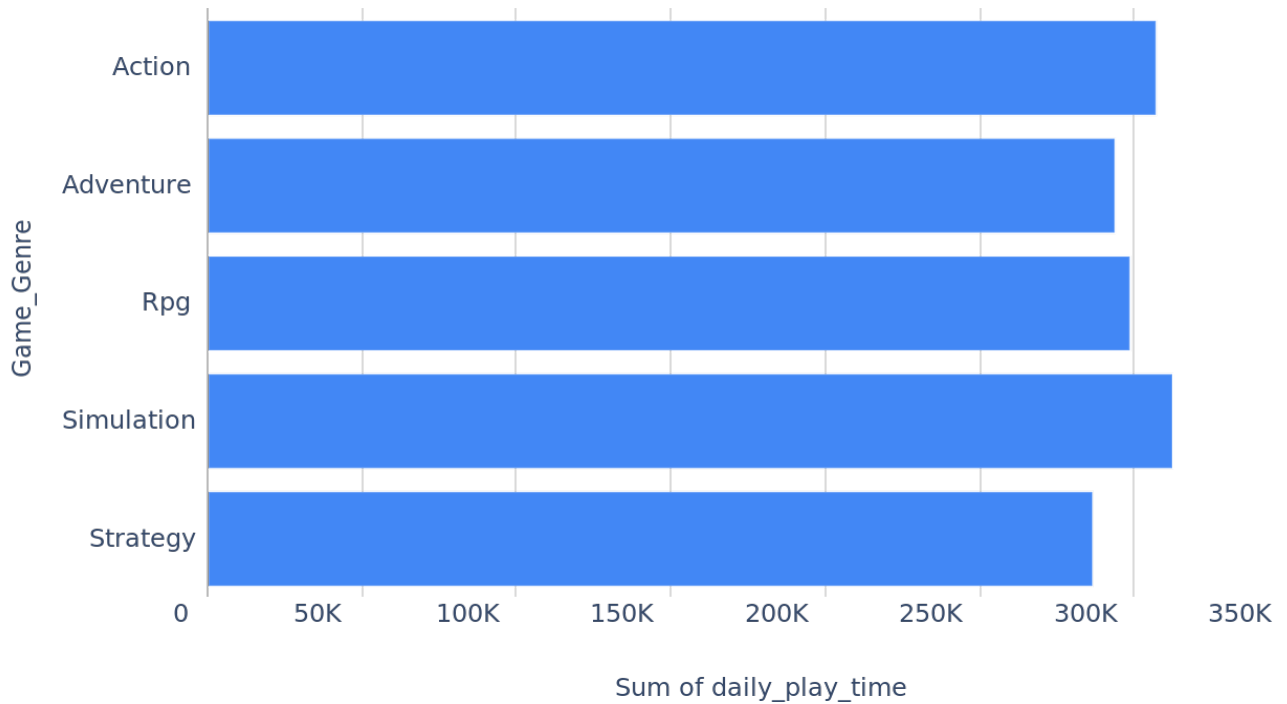

Contrasting the average achievement points earned across different game genres.

achievement_points per game_genre

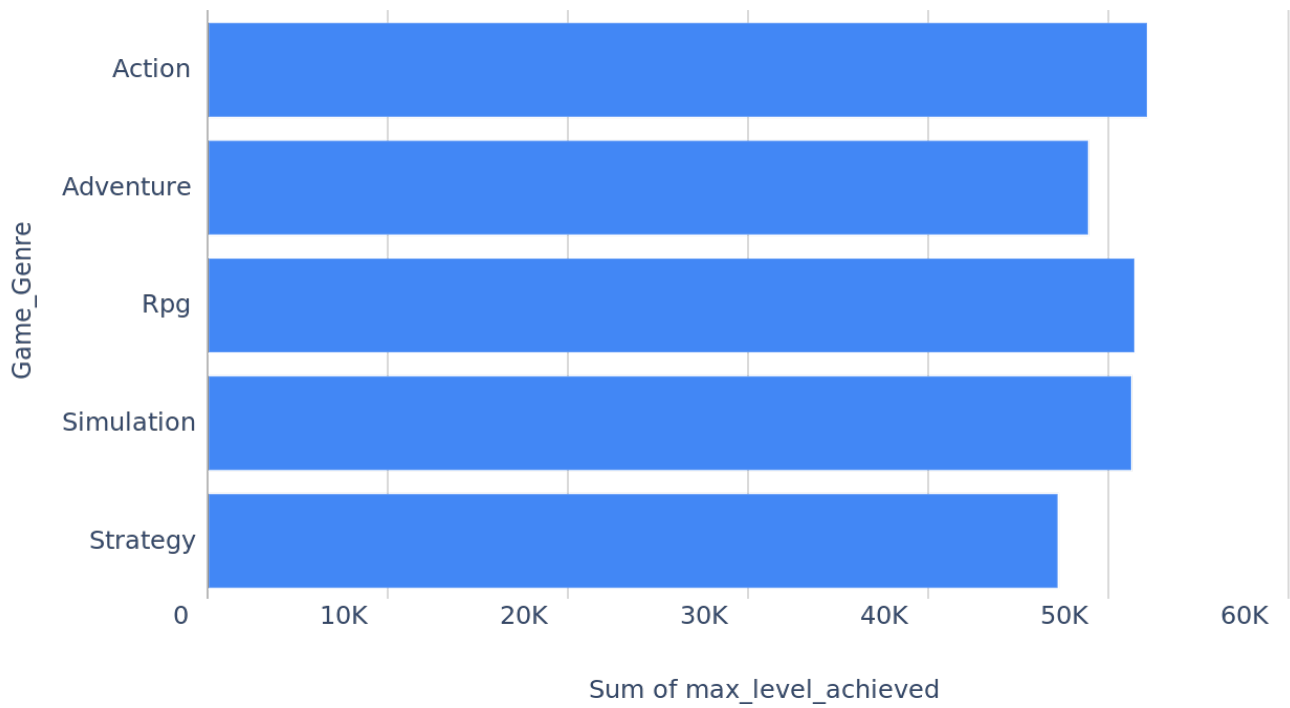

Comparing the average daily play time across different game genres.

daily_play_time per game_genre

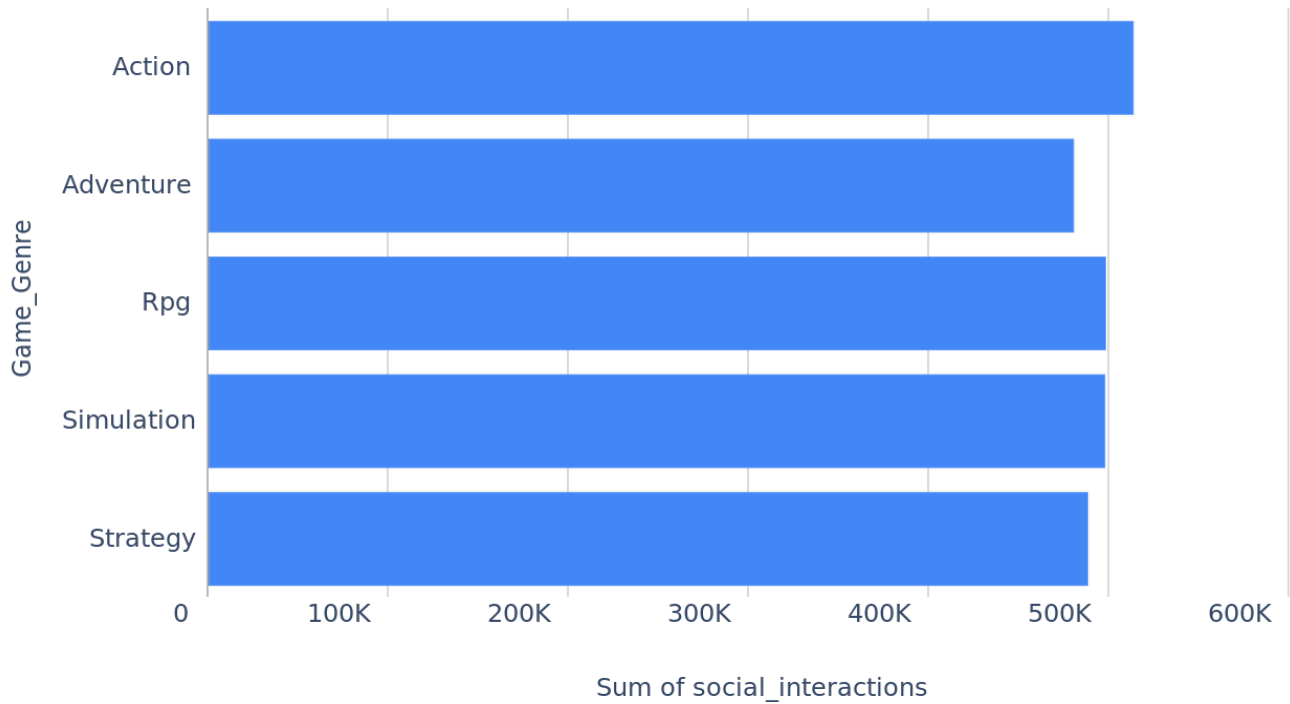

Contrasting the average maximum level achieved across different game genres.

max_level_achieved per game_genre

Comparing the average number of social interactions across different game genres.

social_interactions per game_genre
